

How to...

Introduction to RaceMaster98

RaceMaster98 is the latest Windows version of our Race Management Software, first launched on the DOS platform in 1990 and which subsequently became the UK's leading Race Management product. Throughout the various developments, we have listened to many prominent UK Race Directors and continued to develop the RaceMaster brand in line with user needs and technological advances.

Today's RaceMaster98 is the result of close co-operation with Users and Race Directors to bring you the best possible software to manages your races and to protect your investment by using currently and cheaply available standard PC's with Microsoft's Windows 95, 98 and NT Operating Systems.

We are continually looking to the future to see how other technology developments can help you with your Race Management. In the future, further "Modules" will be added to RaceMaster98. These will include various electronic timing / recording methods, further use of the Internet and World Wide Web and extending RaceMaster98's use to cover Race Series, Relays, Triathlons etc.

If you have obtained an "Evaluation Version" of RaceMaster98 you can see for yourself exactly how it works but, it is limited to a maximum of 35 competitors in any one meeting / event. However, you can use this version to view and print the results of races produced by other clubs. All you need is to download the Meeting File from a web site, receive it by e-mail or diskette!

Finally, we hope that RaceMaster98 enhances your club or organisations' events. Any suggestions or comments that you may have are always welcome, so please contact us with your thoughts.

Regards,

Rob Champion
